DIVINE GRACE COLLEGE OF ARTS, SCIENCE AND TECHNOLOGY (DGCAST) – GAROUA

MARKING GUIDE – FORM TWO TECHNICAL GEOGRAPHY

First Sequence Evaluation, School Year 2026-2027 • Duration: 1 hour • Marks: 20 • Facilitator: Mr KAMDEM Emmanuel

Distribution of marks: Part One 9 marks (Section I: 5; Section II: 4) • Part Two 9 marks (3 tasks × 3) • Presentation 2 marks = **20 marks**.

PART ONE: VERIFICATION OF RESOURCES (9 marks)

Section I: Multiple Choice Questions (10 × 0.5 = 5 marks)

N°	Question	Correct answer	Marks
1	The equatorial region lies between about …	A: 5° N and 5° S	0.5
2	An equatorial region	B: the Congo Basin	0.5
3	Average temperature of the equatorial region	C: 27 °C (nearest option; the lessons give 23 to 25 °C)	0.5
4	Annual rainfall of the equatorial region	C: above 1,500 mm	0.5
5	Annual range of temperature	A: very small (2 to 3 °C)	0.5
6	Washing down of soil nutrients by heavy rain	A: leaching	0.5
7	The equatorial forest is evergreen because …	A: its trees shed their leaves at different times	0.5
8	A hardwood of the equatorial forest	B: mahogany	0.5
9	A human activity of the equatorial region	A: lumbering	0.5
10	A problem of the equatorial region	A: deforestation	0.5

No half-mark for a wrong answer; two letters marked for one question = 0. Question 3: the option "27 °C" is the nearest to the real value (23 to 25 °C); it is the only acceptable answer.

Section II: Structural Questions (4 marks)

N°	Expected answer	Marking	Marks
a)	The wettest month is **October** (290 mm).	Correct month: 1 mark.	1
b)	Any two characteristics shown by the figures: **hot all year** (22 to 25 °C); **very small annual range of temperature** (25 − 22 = 3 °C); **heavy rainfall** (about 1,515 mm a year); **rain in every month** (no dry month); two peaks of rain (May and October).	For each characteristic: 1 mark for the characteristic and ½ mark for the figure quoted from the table (1½ × 2 = 3).	3

PART TWO: VERIFICATION OF COMPETENCES (9 marks)

Task	Expected answer	Marking	Marks
1	The **equatorial forest is being destroyed (deforestation)** by logging and clearing for farms; animals and medicinal plants become rare and the rains irregular.	Deforestation / destruction of the forest: 2 marks. A consequence quoted (rare animals and plants, irregular rains): 1 mark.	3
2	Using Document 1, any three: **timber** (logging for export); **new farms**; **firewood and charcoal**; **roads and mines**.	1 mark per cause from the document, up to 3.	3
3	Any three: **reforestation**; creating national parks and protected areas; forest laws and control of logging licences; fighting illegal logging; improved farming that does not need new land (agroforestry, fertilizer); using gas or other energy instead of firewood; educating the population.	1 mark per valid measure, up to 3.	3

Document 2 (a photograph unrelated to the forest) is a distractor: a candidate who uses it receives no mark for that point.

PRESENTATION (2 marks)

Criterion	Marking	Marks
Neat paper, legible handwriting, answers written in the spaces provided	1 mark if clean and legible; ½ mark if partly	1
Correct spelling and complete sentences	1 mark if few errors; ½ mark if many	1

Total: 5 + 4 + 9 + 2 = 20 marks.
