

DIVINE GRACE COLLEGE OF ARTS, SCIENCE AND TECHNOLOGY (DGCAST) – GAROUA

GEOGRAPHY REVISION SHEET – FORM ONE

First Sequence Evaluation, School Year 2026-2027 • Teacher: Mr KAMDEM Emmanuel
Lessons revised: Lesson 1 (Geography), Lesson 2 (Our Planet, the Earth), PW1 and PW2

A. GEOGRAPHY: MEANING, BRANCHES, METHODS AND IMPORTANCE

1. What is geography?

Answer: Geography is the study of the Earth, its physical features and the activities of the people who live on it.

2. Name the three main branches of geography and say what each one studies.

Answer: **Physical geography** studies natural features: relief, climate, rivers, soils and vegetation.

Human geography studies people and their activities: population, settlement, economic activities.

Practical geography studies the tools of the geographer: maps, statistics, fieldwork.

3. Give two sub-branches of physical geography and two of human geography.

Answer: Physical: geomorphology, climatology, hydrology, biogeography. Human: population geography, settlement geography, economic geography.

4. Give three methods used by geographers to collect information.

Answer: Observation and fieldwork; questionnaires and interviews; maps, photographs and satellite images; statistics and graphs.

5. Give two reasons why geography is important.

Answer: It helps us to find places and read maps; it helps farmers to know seasons and soils; it helps to plan roads, schools and towns; it teaches us to protect the environment.

B. OUR PLANET, THE EARTH

6. Name the eight planets of the solar system in order from the Sun.

Answer: Mercury, Venus, **Earth** (3rd), Mars, Jupiter, Saturn, Uranus, Neptune.

7. Why is the Earth a special planet?

Answer: It is the only planet known to have life, liquid water and air (oxygen).

8. Describe the shape and the size of the Earth.

Answer: The Earth is a sphere, slightly flattened at the poles. Its circumference at the Equator is about 40,000 km and its diameter about 12,700 km.

9. Name the seven continents and the five oceans.

Answer: Continents: Asia, Africa, North America, South America, Antarctica, Europe, Australia (Oceania).

Oceans: Pacific (the largest), Atlantic, Indian, Southern, Arctic. Water covers about **71 %** of the Earth and land about **29 %**.

C. REPRESENTATION OF THE EARTH AND LOCATION OF PLACES

10. Give two differences between a globe and a map.

Answer: A globe is a **round model** of the Earth; a map is a **flat drawing** of the Earth or part of it.

A globe shows the true shapes but only half of the Earth at a time; a map shows the whole Earth at once, is easy to carry and shows more details.

11. Name four elements of the marginal information of a map and give the use of each.

Answer: **Title:** tells what the map shows. **Key (legend):** explains the signs and colours.

Scale: helps to calculate real distances. **North arrow:** shows directions. **Latitudes and longitudes:** help to locate places.

12. On a map with a scale of 1 cm to 25 km, two towns are 8 cm apart. Calculate the real distance.

Answer: Real distance = map distance $\times$ scale value = $8 \times 25 = 200$ km.

13. What are geographical coordinates? How are they written?

Answer: They are the latitude and the longitude of a place. We write the latitude first (N or S), then the longitude (E or W), for example Garoua: **9° N, 13° E**.

14. Give the approximate coordinates of Maroua and Yaoundé, and the position of Cameroon.

Answer: Maroua: 11° N, 14° E. Yaoundé: 4° N, 12° E. Cameroon lies between about 2° N and 13° N and between 8° E and 16° E.

Quick quiz	Answer
A round model of the Earth is called a ...	Globe
The largest ocean is the ...	Pacific Ocean
Population geography belongs to ...	Human geography
The part of a map that explains signs and colours is the ...	Key (legend)

D. PRACTICE OF COMPETENCE

Situation

Moussa lives in Garoua. He wants to visit his uncle in Ngaoundéré, but on the map of Cameroon he cannot find the town, nor calculate how far it is. He asks you for help.

15. What is the problem raised in the situation?

Answer: Moussa cannot read a map: he is unable to locate Ngaoundéré and to calculate its distance from Garoua.

16. Propose three things Moussa can do.

Answer: Read the key and the title of the map; find Ngaoundéré with its coordinates (about 7° N, 13° E); measure the distance on the map with a ruler and multiply it by the scale; ask a teacher or use a phone with GPS.

Exam tip: In Part Two, Question 1 asks for the problem of the situation, Question 2 is answered with **Document 1**, and Question 3 asks you to propose your own solutions. **Document 2 has nothing to do with the situation: do not use it.**
