

DIVINE GRACE COLLEGE OF ARTS, SCIENCE AND TECHNOLOGY (DGCST) – GAROUA GEOGRAPHY REVISION SHEET – FORM TWO

First Sequence Evaluation, School Year 2026-2027 • Teacher: Mr KAMDEM Emmanuel

Lessons revised: Lesson 1 (Rapid growth), PW1 (Demographic indices), Lesson 2 (Uneven distribution), PW2 (Densities in Cameroon)

A. KEY DEFINITIONS

1. Define: population, birth rate, death rate, natural growth.

Answer: Population: the number of people living in a place at a given time.

Birth rate: the number of births per 1,000 people in one year (‰). **Death rate:** the number of deaths per 1,000 people in one year (‰).

Natural growth: the difference between births and deaths.

2. Define population density, ecumene and emigrant.

Answer: Density: the average number of people per km² (population ÷ area). **Ecumene:** the parts of the Earth where people live permanently. **Emigrant:** a person who leaves their own country to live in another.

B. THE RAPID GROWTH OF THE WORLD'S POPULATION

3. Describe the evolution of the world population.

Answer: Fewer than 1 billion people until about 1800; about 2.5 billion in 1950; more than **8 billion in 2022**. Growth is now fastest in Africa and Asia.

4. Give four factors of the rapid growth of population.

Answer: A high birth rate; a falling death rate (vaccines, hospitals, clean water); a better food supply; early marriages and the wish for big families.

5. Give three consequences of rapid population growth on natural resources.

Answer: Farmland becomes scarce and farms smaller; forests are cut for farms and firewood; water becomes scarce and polluted; soils are overused and lose their fertility.

C. CALCULATION OF DEMOGRAPHIC INDICES (PRACTICE)

A town of 150,000 inhabitants with an area of 300 km² recorded 5,400 births and 1,350 deaths in one year.

6. Write the formula of the birth rate and calculate it.

Answer: Birth rate = (births ÷ population) × 1,000 = (5,400 ÷ 150,000) × 1,000 = **36 ‰**.

7. Write the formula of the death rate and calculate it.

Answer: Death rate = (deaths ÷ population) × 1,000 = (1,350 ÷ 150,000) × 1,000 = **9 ‰**.

8. Calculate the natural growth rate and the population density.

Answer: Natural growth rate = (36 – 9) ÷ 10 = **2.7 ‰**. Density = 150,000 ÷ 300 = **500 people per km²**.

D. THE UNEVEN DISTRIBUTION OF THE WORLD'S POPULATION

9. Name three densely populated areas and three sparsely populated areas of the world.

Answer: Dense: East Asia, South Asia, Western Europe, West Africa, north-east USA. Sparse: hot deserts (Sahara), polar lands, high mountains, thick forests.

10. Give four factors of the uneven distribution of population.

Answer: Climate (mild climate with enough rain); relief and soils (flat land, fertile soils); water (rivers, lakes, coasts); economic factors (jobs, industries, ports, mines); social and political factors (services, security).

11. Classify the regions of Cameroon by population density.

Answer: High (over 100 per km²): Littoral, West, North-West, Far North. Moderate: Centre, South-West, North. Low (under 20 per km²): East, South, Adamawa.

Quick quiz	Answer
The birth rate is expressed ...	Per thousand (‰)
Density = ... ÷ ...	Population ÷ area
A sparsely populated area of the world	The Sahara Desert
Region of Cameroon with the lowest density	The East

E. PRACTICE OF COMPETENCE

Situation

In a quarter of Garoua, families get bigger every year. Long queues form at the only borehole, classrooms are overcrowded and the last trees are cut for firewood. The quarter chief asks you for help.

12. What is the problem raised in the situation?

Answer: The rapid growth of the population puts heavy pressure on the resources and services of the quarter (water, schools, trees).

13. Propose three solutions.

Answer: Educate families on family planning and send girls to school; build more boreholes and classrooms; plant trees and use improved stoves to save firewood.

Exam tip: In Part Two, Question 1 asks for the problem of the situation, Question 2 is answered with **Document 1**, and Question 3 asks you to propose your own solutions. **Document 2 has nothing to do with the situation: do not use it.**
