DIVINE GRACE COLLEGE OF ARTS, SCIENCE AND TECHNOLOGY (DGCAST) – GAROUA

GEOGRAPHY REVISION SHEET – FORM ONE

First Sequence Evaluation, School Year 2026-2027 • Teacher: Mr KAMDEM Emmanuel

Lessons revised: Lesson 1 (Geography), Lesson 2 (Our Planet, the Earth), PW1 and PW2, Lesson 3 (The Earth: a planet moving in space)

A. GEOGRAPHY: MEANING, BRANCHES, METHODS AND IMPORTANCE

1. What is geography?

Answer: Geography is the study of the Earth, its physical features and the activities of the people who live on it.

2. Name the three main branches of geography and say what each one studies.

Answer: Physical geography studies natural features: relief, climate, rivers, soils and vegetation. **Human geography** studies people and their activities: population, settlement, economic activities. **Practical geography** studies the tools of the geographer: maps, statistics, fieldwork.

3. Give three methods used by geographers and two reasons why geography is important.

Answer: Methods: observation and fieldwork; questionnaires and interviews; maps, photographs and satellite images; statistics and graphs. Importance: it helps us to find places and read maps; it helps farmers to know the seasons and soils; it helps to plan roads, schools and towns; it teaches us to protect the environment.

B. OUR PLANET, THE EARTH

4. Name the eight planets in order from the Sun. Why is the Earth special?

Answer: Mercury, Venus, **Earth** (3rd), Mars, Jupiter, Saturn, Uranus, Neptune. The Earth is the only planet known to have life, liquid water and air.

5. Describe the shape and size of the Earth. Name the continents and oceans.

Answer: A sphere, slightly flattened at the poles; circumference at the Equator about 40,000 km; diameter about 12,700 km. Water covers about **71 %** of the Earth and land about **29 %**.

Continents: Asia, Africa, North America, South America, Antarctica, Europe, Australia. Oceans: Pacific (the largest), Atlantic, Indian, Southern, Arctic.

C. REPRESENTATION OF THE EARTH AND LOCATION OF PLACES

6. Give two differences between a globe and a map.

Answer: A globe is a **round model** of the Earth; a map is a **flat drawing** of the Earth or part of it. A globe shows the true shapes but only half of the Earth at a time; a map shows the whole Earth at once and is easy to carry.

7. Name four elements of the marginal information of a map and give the use of each.

Answer: Title: what the map shows. **Key (legend)**: explains the signs and colours. **Scale**: helps to calculate real distances. **North arrow**: shows directions. **Latitudes and longitudes**: help to locate places.

8. On a map with a scale of 1 cm to 25 km, two towns are 8 cm apart. Calculate the real distance.

Answer: Real distance = map distance × scale value = 8 × 25 = **200 km**.

9. What are geographical coordinates? How do you read and write them?

Answer: The latitude and the longitude of a place. Find the place, follow the line of latitude to the side of the map (N or S), then the line of longitude to the top or bottom (E or W). Write the latitude first: Garoua is at about **9° N, 13° E**; Maroua 11° N, 14° E; Yaoundé 4° N, 12° E.

D. THE EARTH: A PLANET MOVING IN SPACE

10. Define rotation, revolution, axis and orbit.

Answer: Rotation: the turning of the Earth on its axis from west to east in 24 hours. **Revolution**: the movement of the Earth around the Sun in 365¼ days.

Axis: the imaginary line through the Earth from the North Pole to the South Pole. **Orbit**: the path that the Earth follows around the Sun.

11. Give four consequences of rotation.

Answer: Day and night; the Sun seems to rise in the east and to set in the west; time differences (places in the east are ahead by 1 hour for every 15° of longitude); deflection of winds and ocean currents (to the right in the Northern Hemisphere, to the left in the Southern Hemisphere).

12. Give four consequences of revolution.

Answer: Change of seasons (the Earth moves round the Sun with its axis tilted); varying length of day and night (longer in summer, shorter in winter, except at the Equator); change in the height of the midday Sun; equinoxes (21 March and 23 September) and solstices (21 June and 22 December); leap year (366 days every fourth year).

Quick quiz	Answer
The turning of the Earth on its axis is called …	**Rotation**
The Earth goes round the Sun in …	**365¼ days**

Population geography belongs to …	**Human geography**
The part of a map that explains signs and colours is the …	**Key (legend)**

E. PRACTICE OF COMPETENCE

Situation

Moussa lives in Garoua. He wants to visit his uncle in Ngaoundéré, but on the map of Cameroon he cannot find the town, nor calculate how far it is. He asks you for help.

13. What is the problem raised in the situation?

Answer: Moussa cannot read a map: he is unable to locate Ngaoundéré and to calculate its distance from Garoua.

14. Propose three things Moussa can do.

Answer: Read the key and the title of the map; find Ngaoundéré with its coordinates (about 7° N, 14° E); measure the distance with a ruler and multiply it by the scale; ask a teacher or use a phone with GPS.

Exam tip: *In Part Two, Question 1 asks for the problem of the situation, Question 2 is answered with* ***Document 1****, and Question 3 asks you to propose your own solutions.* ***Document 2 has nothing to do with the situation: do not use it.***
