DIVINE GRACE COLLEGE OF ARTS, SCIENCE AND TECHNOLOGY (DGCAST) – GAROUA

MARKING GUIDE – FORM THREE GEOGRAPHY

First Sequence Evaluation, School Year 2026-2027 • Duration: 1 hour • Marks: 20 • Facilitator: Mr KAMDEM Emmanuel

Distribution of marks: Part One 9 marks (Section I: 5; Section II: 4) • Part Two 9 marks (3 tasks × 3) • Presentation 2 marks = **20 marks**.

PART ONE: VERIFICATION OF RESOURCES (9 marks)

Section I: Multiple Choice Questions (10 × 0.5 = 5 marks)

N°	Question	Correct answer	Marks
1	From the Sun, the Earth is the …	C: third planet	0.5
2	The natural satellite of the Earth	B: the Moon	0.5
3	Phase of the Moon when the whole lit face is seen	C: Full Moon	0.5
4	Circumference of the Earth at the Equator	C: 40,000 km (about 40,075 km)	0.5
5	Shape of the Earth	C: a sphere slightly flattened at the poles	0.5
6	A proof that the Earth is spherical	A: ships disappear gradually below the horizon	0.5
7	Latitude 0° is called the …	B: Equator	0.5
8	Longitude 0° is called the …	C: Greenwich (Prime) Meridian	0.5
9	The Tropic of Cancer is at latitude …	B: 23½° N	0.5
10	Lines of longitude are also called …	B: meridians	0.5

No half-mark for a wrong answer; two letters marked for one question = 0.

Section II: Structural Questions (4 marks)

N°	Expected answer	Marking	Marks
a)	Garoua: about **9° N, 13° E** (accept 9° to 9½° N and 12½° to 14° E, read on the map).	Latitude with N: 1 mark. Longitude with E: 1 mark. Latitude must be written first; if the order is reversed or N/E is missing, deduct ½ mark.	2
b)	Douala: about **4° N, 10° E** (accept 4° N and 9½° to 11° E, read on the map).	Latitude with N: 1 mark. Longitude with E: 1 mark. Same rule on order and on N/E.	2

PART TWO: VERIFICATION OF COMPETENCES (9 marks)

Situation: the fishermen of Lake Lagdo cannot give their exact position to the rescue team because they do not know what latitude and longitude are.

Task	Expected answer	Marking	Marks
1	The fishermen **cannot give their exact position** (their geographical coordinates) to the rescuers, so the rescuers cannot locate them; they do not know what latitude and longitude are.	Problem identified (they cannot give their exact position / do not know the coordinates): 2 marks. Consequence or cause stated (rescuers cannot find them; they ignore latitude and longitude): 1 mark.	3

Task	Expected answer	Marking	Marks
2	Using Document 1: the exact position is given by the **geographical coordinates**. They read **latitude** (distance north or south of the Equator) and **longitude** (distance east or west of the Greenwich Meridian) in degrees on a mobile phone with **GPS**, which shows the place where it is (e.g. about 9° 03′ N, 13° 44′ E near the Lagdo dam); they give the latitude first, then the longitude, to the rescuers.	Use of the phone with GPS: 1 mark. Latitude and longitude (with their meaning or direction): 1 mark. Giving the numbers to the rescuers, latitude first (example from the document): 1 mark.	3
3	Any three: learn what latitude and longitude mean; keep a charged phone with GPS (or a GPS device) in the canoe; read and note the coordinates of the fishing area before leaving; carry a map of the lake; give the position to the rescue team at once; tell their families and the port where they will fish.	1 mark per valid proposal, up to 3 (a proposal must help the fishermen to be located easily in future).	3

Note on the map: *on the printed map, the longitude labels at the top (10° E, 12° E, 14° E, 16° E) are not exactly above the vertical lines, so a candidate may read the longitude about 1° off. This is why a wider tolerance is accepted for the longitude (Garoua 12½° to 14° E; Douala 9½° to 11° E). The latitudes are read correctly.*

Document 2 (a market) is a distractor: a candidate who uses it receives no mark for that point.

PRESENTATION (2 marks)

Criterion	Marking	Marks
Neat paper, legible handwriting, answers written in the spaces provided	1 mark if clean and legible; ½ mark if partly	1
Correct spelling and complete sentences; coordinates written properly (e.g. 9° N, 13° E)	1 mark if few errors; ½ mark if many	1

Total: 5 + 4 + 9 + 2 = 20 marks.
